RE: ASSOCIATE PROFESSOR IN CLIMATE DYNAMICS, REF. 2026/1184

Dear Professor Halvorsen,

I am writing to apply for the Associate Professorship in Climate Dynamics advertised by the Department of Earth Sciences. I am a postdoctoral fellow at the Bolin Centre in Uppsala, where I study how the Atlantic overturning circulation responded to abrupt warming during the last deglaciation, and how those events can constrain the models we use to project the coming century.

My research joins three strands that rarely meet in one person: proxy records from marine sediment cores, idealised ocean models, and the statistical tools that link the two. In the past four years this work has produced eleven peer-reviewed papers, including a 2025 article in *Nature Geoscience* showing that two rival reconstructions of the Younger Dryas are consistent once seasonal bias in the proxies is modelled explicitly. Bergen's strengths in ocean observation and the Bjerknes Centre's modelling groups are exactly the setting in which this programme can grow.

Teaching is a part of the job I look forward to. I have designed and taught a graduate course on palaeoclimate data analysis, supervised two master's theses to completion, and co-supervise a doctoral student. I would be glad to contribute to the department's courses in physical oceanography and to build a seminar that brings model and proxy students into the same room.

I enclose my curriculum vitae, a research statement, a teaching statement and three representative publications. Thank you for your time and consideration; I would welcome the chance to discuss how my work could support the department's plans.

Yours sincerely,

Tomás Ferreira Lindqvist

ENCLOSURES Curriculum vitae; research statement; teaching statement; three publications.
