Abstract

State the problem, the approach and the main result in a few sentences. Keep it self-contained: a reader should understand the contribution without opening the paper.

1 Introduction

Introduce the problem and why it matters. Cite prior work with `\cite`, for example [1].

2 Method

Describe what you did. Equations are numbered automatically:

$$e^{i\pi} + 1 = 0. \tag{1}$$

Refer to them with `\eqref`, as in (1).

3 Results

Report what you found. Place figures in this folder and include them with `\includegraphics`.

4 Conclusion

Summarise the contribution and name the open questions [2].
